

DAY 1 : HDOC

Topic: Basic User Inputs, Operations & Output

1. Problem Statement

Q1 (User Inputs, Operations & Output)

Write a program to input two numbers and display their sum.

2. Algorithm

: Begin the execution of the program

: Declare three integer variables , number 1, number 2, and sum

: Read two integer inputs from the user using scanf.

: Calculate the addition using

Sum= num1+ num2 .

: Output the result on the console in the required format sum< value > .

: Terminate the program execution (return 0)

3. Test cases table

Test Case	1 st Input	2 nd Input	Expected Output
Test case 1	2	3	5
Test case 2	-1	20	19

4. C Program Source Code

```
#include <stdio.h>
```

```
int main() {
```

```
    int num1, num2, sum;
```

```
printf("Enter two numbers: ");  
  
scanf("%d %d", &num1, &num2);  
  
sum = num1 + num2;  
  
// Display result  
printf("Sum = %d\n", sum);  
  
return 0;  
}
```

```
1 #include <stdio.h>  
2  
3 int main() {  
4     int num1, num2, sum;  
5  
6     printf("Enter two numbers: ");  
7     scanf("%d %d", &num1, &num2);  
8  
9     // Calculate sum  
0     sum = num1 + num2;  
1  
2     // Display result  
3     printf("Sum = %d\n", sum);  
4  
5     return 0;  
6 }
```

- **EXECUTION OUTPUT :**

Output

Enter two numbers: 2 3

Sum = 5

=== Code Execution Successful ===

Output

Enter two numbers: -1 20

Sum = 19

=== Code Execution Successful ===
